

Step 1: Install Required Packages

Open VS Code terminal:

```
pip install requests
pip install twilio
pip install stripe
pip install django-allauth
pip install django-restframework-simplejwt
```

Step 2: Mailgun Email API

Create free account:

[Mailgun](#)

Get:

- Domain
 - API Key
-

Step 3: Twilio SMS API

Create free account:

[Twilio](#)

Get:

- Account SID
 - Auth Token
 - Twilio Phone Number
-

Step 4: Stripe API

Create free account:

[Stripe Dashboard](#)

Copy:

- Secret Test Key
-

Step 5: settings.py

Open:

```
foodiehub/settings.py
```

Add:

```
INSTALLED_APPS = [  
    'django.contrib.sites',  
    'rest_framework',  
    'rest_framework.authtoken',  
    'allauth',  
    'allauth.account',  
    'allauth.socialaccount',  
    'allauth.socialaccount.providers.google',  
    'api',  
]
```

Add:

```
SITE_ID = 1
```

Step 6: views.py

Open:

```
api/views.py
```

Add:

```
import requests
import stripe

from twilio.rest import Client

from rest_framework.views import APIView
from rest_framework.response import Response
from rest_framework import status

# -----
# 1. Send Email using Mailgun
# -----

class SendEmailAPIView(APIView):

    def post(self, request):

        email = request.data.get("email")

        domain = "YOUR_MAILGUN_DOMAIN"
        api_key = "YOUR_MAILGUN_API_KEY"

        response = requests.post(

            f"https://api.mailgun.net/v3/{domain}/messages",

            auth=("api", api_key),

            data={
                "from": f"FoodieHub <mailgun@{domain}>",
                "to": [email],
                "subject": "Welcome to FoodieHub",
                "text": "Thank you for joining FoodieHub!"
            }
        )

        if response.status_code == 200:

            return Response({
                "message": "Email sent successfully"
            })
```

```

        return Response({
            "error": "Email failed"
        })

# -----
# 2. Send SMS using Twilio
# -----

class SendSMSAPIView(APIView):

    def post(self, request):

        phone = request.data.get("phone")
        message = request.data.get("message")

        account_sid = "YOUR_TWILIO_ACCOUNT_SID"
        auth_token = "YOUR_TWILIO_AUTH_TOKEN"

        client = Client(
            account_sid,
            auth_token
        )

        sms = client.messages.create(

            body=message,

            from_="YOUR_TWILIO_NUMBER",

            to=phone
        )

        return Response({
            "message": "SMS sent successfully",
            "sid": sms.sid
        })

# -----
# 3. Stripe Payment API
# -----

class PaymentAPIView(APIView):

    def post(self, request):

```

```
stripe.api_key = "YOUR_STRIPE_SECRET_KEY"

amount = request.data.get("amount")
currency = request.data.get("currency")

try:

    payment_intent = stripe.PaymentIntent.create(

        amount=int(amount),
        currency=currency,

        payment_method_types=["card"]
    )

    return Response({

        "status": "success",

        "transaction_id":
            payment_intent.id
    })

except Exception as e:

    return Response({

        "status": "failed",
        "error": str(e)

    })
```

Step 7: Google Login + JWT Authentication

Install Google provider.

Open:

```
foodiehub/settings.py
```

Add:

```
REST_FRAMEWORK = {  
  
    'DEFAULT_AUTHENTICATION_CLASSES': (  
  
        'rest_framework_simplejwt.authentication.JWTAuthentication',  
  
    ),  
}
```

Step 8: Google OAuth Setup

Open:

[Google Cloud Console](#)

Create:

- OAuth Client ID

Add Redirect URI:

```
http://127.0.0.1:8000/accounts/google/login/callback/
```

Step 9: urls.py

Open:

```
api/urls.py
```

Add:

```
from django.urls import path  
  
from .views import (  
    SendEmailAPIView,  
    SendSMSAPIView,  
    PaymentAPIView  
)
```

```
urlpatterns = [

    path(
        'send-email/',
        SendEmailAPIView.as_view()
    ),

    path(
        'send-sms/',
        SendSMSAPIView.as_view()
    ),

    path(
        'pay/',
        PaymentAPIView.as_view()
    ),

]
```

Step 10: Test APIs in Postman

Send Email

POST

`http://127.0.0.1:8000/api/send-email/`

Body:

```
{
  "email": "test@gmail.com"
}
```

Send SMS

POST

`http://127.0.0.1:8000/api/send-sms/`

Body:

```
{
  "phone": "+911234567890",
  "message": "Hello from FoodieHub"
}
```

Stripe Payment

POST

```
http://127.0.0.1:8000/api/pay/
```

Body:

```
{
  "amount": 500,
  "currency": "usd"
}
```

Response:

```
{
  "status": "success",
  "transaction_id": "pi_xxxxx"
}
```

Step 11: Deploy to PythonAnywhere

Create free account:

[PythonAnywhere](#)

Upload project.

Open Bash console:

```
pip install -r requirements.txt
```

Run:

```
python manage.py migrate
```

Reload web app.

Live URL example:

```
https://yourusername.pythonanywhere.com/api/send-email/
```

Step 12: Test Live Endpoint in Postman

POST request:

```
https://yourusername.pythonanywhere.com/api/send-email/
```

Body:

```
{  
  "email": "test@gmail.com"  
}
```

Expected Response:

```
{  
  "message": "Email sent successfully"  
}
```
